Year 2: Exploring Medical Ethics in Practice

Main Topics:

Subject 3. Ethics in Life-Saving Situations

1. Should CPR be performed on an unconscious person?

- a) Depends on situation
- b) Only if trained
- c) Yes, always
- d) No, never

Correct Answer: c) Yes, always

Explanation: Medical Ethicist believes that performing CPR on an unconscious person is a critical action in life-saving situations. Immediate intervention can significantly increase the chances of survival. Ethical guidelines support the initiation of CPR unless there are clear indications that it should not be performed, such as a valid Do Not Resuscitate (DNR) order.

2. Is it ethical to withdraw life support?

- a) No, never
- b) Only with consent
- c) Depends on hospital policy
- d) Yes, if indicated

Correct Answer: d) Yes, if indicated

Explanation: Medical Ethicist asserts that withdrawing life support can be ethical when it aligns with the patient's wishes or if it's determined that the treatment is no longer beneficial. Ethical considerations include the patient's quality of life, prognosis, and previously expressed wishes, making this a complex decision requiring careful deliberation.

3. Should a patient's family decide on treatment?

- a) Yes, always
- b) Depends on legal status
- c) No, it's patient's choice
- d) Only if patient is unconscious

Correct Answer: d) Only if patient is unconscious

Explanation: Medical Ethicist highlights that when a patient is unconscious, family members often play a crucial role in decision-making. However, if the patient is capable of making decisions, their autonomy should be prioritized. Ethical principles emphasize respecting the patient's wishes while also considering the family's input when necessary.

4. Are there limits to patient autonomy?

- a) Only with serious conditions
- b) No, it's absolute
- c) Yes, in specific situations
- d) Depends on ethics committee

Correct Answer: c) Yes, in specific situations

Explanation: Medical Ethicist acknowledges that patient autonomy is fundamental but may have limits, especially in situations where patients cannot make informed decisions. Ethical guidelines allow for intervention when the patient's choices could result in significant harm or when they lack the capacity to understand the consequences of their decisions.

5. Can unconscious patients give consent?

- a) Only if previously documented
- b) Yes, always
- c) Depends on medical condition
- d) No, never

Correct Answer: d) No, never

Explanation: Medical Ethicist maintains that unconscious patients cannot give consent due to their inability to understand or communicate their wishes. In these cases, surrogate decision-makers or advance directives become essential for guiding treatment choices and ensuring that actions align with the patient's values and preferences.

6. Is it ethical to perform experimental treatments?

- a) Only in emergencies
- b) Yes, with patient consent
- c) Depends on research approval
- d) No, never

Correct Answer: b) Yes, with patient consent

Explanation: Medical Ethicist supports the idea that experimental treatments can be ethical if the patient provides informed consent and understands the potential risks and benefits. Ethical practice requires that patients are fully informed and that the treatment aligns with their values, especially in life-saving situations where options may be limited.

7. Should life support be provided indefinitely?

- a) No, it's not beneficial
- b) Yes, always
- c) Only if family agrees
- d) Depends on prognosis

Correct Answer: a) No, it's not beneficial

Explanation: Medical Ethicist argues that life support should not be provided indefinitely, especially if it no longer contributes to a meaningful quality of life. Ethical guidelines stress the importance of evaluating the patient's condition and prognosis regularly to determine if continued life support is in the patient's best interest.

8. Can personal beliefs affect medical decisions?

- a) No, should be separate
- b) Only in specific cases
- c) Depends on healthcare provider
- d) Yes, significantly

Correct Answer: d) Yes, significantly

Explanation: Medical Ethicist recognizes that personal beliefs can significantly influence medical decisions, both for patients and healthcare providers. These beliefs may shape perspectives on treatment options and end-of-life care, underscoring the importance of respectful dialogue to navigate ethical dilemmas and find common ground.

9. Should a patient's wishes override medical advice?

- a) Only if well-informed
- b) Yes, always
- c) Depends on treatment type
- d) No, never

Correct Answer: a) Only if well-informed

Explanation: Medical Ethicist emphasizes that while patient wishes are vital, they should be respected only when the patient is well-informed about their medical situation. Ethical practice requires ensuring that patients understand the implications of their choices, as uninformed decisions can lead to adverse outcomes.

10. Is it ethical to use life-saving technology?

- a) Yes, always
- b) No, in all cases
- c) Only with consent
- d) Depends on circumstances

Correct Answer: a) Yes, always

Explanation: Medical Ethicist asserts that utilizing life-saving technology is ethical when it serves to improve patient outcomes. It is essential, however, to consider the patient's wishes and overall prognosis. This technology should support the patient's values and goals, ensuring that its use aligns with ethical standards.

11. Should life support be stopped if no improvement?

- a) Depends on hospital policy
- b) Yes, if no hope
- c) Only with family consent
- d) No, keep trying

Correct Answer: b) Yes, if no hope

Explanation: Medical Ethicist advocates for stopping life support when there is no reasonable hope for recovery. Ethical principles dictate that prolonging life under such circumstances can cause unnecessary suffering. Decisions must be based on the patient's quality of life and prognosis, ensuring a humane approach to end-of-life care.

12. Is it ethical to prioritize younger patients?

- a) No, all equal
- b) Only in emergencies
- c) Yes, morally justified
- d) Depends on situation

Correct Answer: a) No, all equal

Explanation: Medical Ethicist firmly believes that all patients deserve equal treatment regardless of age. Ethical guidelines emphasize fairness and justice in healthcare, ensuring that decisions are based on medical need rather than subjective judgments about age. This approach fosters equity in life-saving situations.

13. Can a patient refuse treatment?

- a) No, never
- b) Yes, always
- c) Only with informed consent
- d) Depends on circumstance

Correct Answer: b) Yes, always

Explanation: Medical Ethicist supports the patient's right to refuse treatment, as autonomy is a core ethical principle in healthcare. Patients have the right to make decisions about their own bodies, even if those decisions may lead to negative health outcomes. Ensuring informed consent is essential for this process.

14. Should medical professionals intervene against a patient's wishes?

- a) Depends on ethics committee
- b) Only in emergencies
- c) Yes, if necessary
- d) No, never

Correct Answer: c) Yes, if necessary

Explanation: Medical Ethicist acknowledges that intervention may be justified against a patient's wishes in situations where there is an immediate risk to life or serious harm. Ethical guidelines suggest prioritizing patient safety while also considering the patient's values and previously expressed wishes whenever possible.

15. Is informed consent necessary in emergencies?

- a) No, never
- b) Depends on patient condition
- c) Only if possible
- d) Yes, always

Correct Answer: c) Only if possible

Explanation: Medical Ethicist recognizes that informed consent is crucial, but in emergencies, it may not always be feasible. When a patient's life is at risk and they cannot provide consent, medical professionals are ethically obligated to act in the best interests of the patient, prioritizing immediate life-saving actions.

16. Should patients be kept informed about their condition?

- a) No, it's distressing
- b) Yes, always
- c) Only if they ask
- d) Depends on the situation

Correct Answer: b) Yes, always

Explanation: Medical Ethicist believes that transparency about a patient's condition is essential for fostering trust and informed decision-making. Keeping patients informed allows them to participate actively in their care and aligns with ethical standards that prioritize patient autonomy and shared decision-making.

17. Are advance directives important?

- a) Depends on situation
- b) No, not necessary
- c) Yes, very important
- d) Only for elderly patients

Correct Answer: c) Yes, very important

Explanation: Medical Ethicist emphasizes the significance of advance directives in guiding medical decisions when patients are unable to communicate their wishes. These documents ensure that healthcare providers honor the patient's preferences and values, making them a crucial component of ethical medical practice, especially in life-threatening situations.

18. Should healthcare providers advocate for patients?

- a) No, it's inappropriate
- b) Depends on patient's wishes
- c) Yes, always
- d) Only in emergencies

Correct Answer: c) Yes, always

Explanation: Medical Ethicist asserts that healthcare providers have an ethical obligation to advocate for their patients' best interests. This advocacy involves ensuring that patients receive appropriate care, respecting their preferences, and helping them navigate complex medical decisions, thereby promoting patient autonomy and well-being.

19. Is it ethical to prolong suffering for life?

- a) No, unethical
- b) Yes, morally acceptable
- c) Depends on the family
- d) Only in special cases

Correct Answer: a) No, unethical

Explanation: Medical Ethicist argues that prolonging suffering for the sake of life is ethically unacceptable. Healthcare should aim to alleviate pain and enhance the quality of life. Ethical guidelines stress the importance of compassionate care that respects the dignity and preferences of patients, especially at end-of-life stages.

20. Can personal biases affect treatment decisions?

- a) Depends on healthcare provider
- b) Yes, significantly
- c) Only in rare cases
- d) No, should be objective

Correct Answer: b) Yes, significantly

Explanation: Medical Ethicist acknowledges that personal biases can inadvertently influence treatment decisions. It is essential for healthcare providers to recognize and manage their biases to ensure fair and equitable treatment for all patients. Ethical practice requires self-awareness and ongoing education to minimize the impact of these biases.

21. Should ethical dilemmas be discussed openly?

- a) Depends on the stakeholders
- b) Yes, always
- c) No, it's confidential
- d) Only in specific cases

Correct Answer: b) Yes, always

Explanation: Medical Ethicist believes that discussing ethical dilemmas openly is crucial for promoting transparency and collaborative decision-making. Engaging in dialogue allows healthcare professionals to consider diverse perspectives, fostering ethical reflection and ultimately leading to better patient outcomes in complex situations.

22. Is it ethical to respect a patient's cultural beliefs?

- a) Only in specific cases
- b) Depends on provider's beliefs
- c) Yes, always
- d) No, not if harmful

Correct Answer: c) Yes, always

Explanation: Medical Ethicist emphasizes the importance of respecting a patient's cultural beliefs in medical decision-making. This respect fosters trust and enhances the patient-provider relationship. Ethical guidelines advocate for culturally competent care, ensuring that treatment decisions honor the patient's values and improve health outcomes.

23. Should life-saving treatments be equally accessible?

- a) Yes, absolutely
- b) Only for specific populations
- c) No, based on need
- d) Depends on funding

Correct Answer: a) Yes, absolutely

Explanation: Medical Ethicist insists that life-saving treatments should be accessible to all individuals, regardless of socioeconomic status or background. Ethical principles of justice and equity mandate that healthcare resources are distributed fairly, ensuring that every patient has the opportunity to receive necessary life-saving interventions.

24. Can a patient change their mind about treatment?

- a) No, once decided
- b) Depends on situation
- c) Yes, at any time
- d) Only if informed

Correct Answer: c) Yes, at any time

Explanation: Medical Ethicist upholds that patients have the right to change their minds about treatment at any time, reflecting the principle of autonomy. This flexibility allows patients to reassess their values and circumstances, ensuring that their healthcare decisions remain aligned with their current preferences and understanding.

25. Should families be involved in end-of-life decisions?

- a) No, it's personal
- b) Yes, always
- c) Only if requested
- d) Depends on the situation

Correct Answer: b) Yes, always

Explanation: Medical Ethicist advocates for family involvement in end-of-life decisions, especially when patients are unable to communicate their wishes.
